EDUCATION

B.Sc. Computer Science — Veritas University Abuja, Nigeria

September 2022 – June 2026

EXPERIENCE

Jeroid — Mobile Engineer · Contract · Remote · Lagos, Nigeria

August 2026 – Present

- Built physical and virtual card experiences for JeroidPay, covering card issuance, card controls, security verification, and transaction-related flows.
- Integrated PIN, unlock-code, verification, and MFA flows across card and KYC journeys, consolidating repeated security interactions into a consistent experience.
- Improved app performance and stability through image-loading and rendering optimizations, while delivering transaction receipts, account limits, and JeroidPay ID/QR functionality.

Ohere Credit — Backend Engineer · Contract · Remote · Dubai, UAE

July 2026 – Present

- Built the credit disbursement system that allows customers to use approved credit for bank payouts, with safeguards for duplicate payments, admin review, reconciliation, and recovery.
- Redesigned autopay and repayment flows across multiple payment providers, securing webhook processing and preventing duplicate or fraudulent repayment events.
- Built bill payment and credit workflows for airtime, data, electricity, and cable services, including provider integrations, transaction tracking, fees, and reconciliation.
- Built a cash coverage engine using bank-statement data to assess customer cash capacity and support credit-limit decisions.

Polishpad — Full-Stack Engineer · Fulltime · Remote · London, UK

April 2026 – Present

- Built the mobile application end-to-end, covering bookings, calendar, customers, payments, notifications, reporting, and the professional marketplace.
- Built the backend and admin platform powering bookings, payments, subscriptions, calendar synchronization, messaging, business management, and platform operations.
- Built the billing and payments experience, including subscriptions, business onboarding, refunds, card payments, and in-person Tap to Pay with Stripe Terminal, with signature-verified webhooks.
- Reduced booking-write latency by ~30% through caching and transaction optimization; built recurring bookings, Google/Microsoft calendar sync, and scheduled CSV imports.

Script Desk — Mobile Engineer · Contract · Remote · Lagos, Nigeria

June 2024 – August 2026

- Designed a full loan lifecycle platform request, credit scoring, approval, and repayment tracking deployed to production with real-time notification and payment gateway integration.
- Delivered a healthcare scheduling and records platform supporting appointment booking, diagnosis management, and prescription workflows, cutting administrative overhead for clinic operators.
- Designed and developed Nimi, an Nfc platform that fosters personalised, exclusive experiences, strengthening the connection between artists and their fans.

FixmasterPos — Backend Engineer · Full-time · Remote · New York, NY, USA

September 2024 – April 2026

- Engineered v2 of the FixMaster POS API, reducing average response time by ~40% through query optimization, caching, and architectural refactoring, improving platform scalability for 1,000+ concurrent users.
- Built a multi-provider bill payment feature integrating 150+ U.S. and international service providers via REST APIs, enabling seamless cross-platform transactions at scale.
- Developed automated time-tracking and clock-in/clock-out flows with real-time hourly payroll calculations, eliminating manual payroll errors.

PocketLawyers — Backend Engineer · Contract · Remote · Lagos, Nigeria

March 2024 – Jul 2024

- Designed and delivered virtual legal services infrastructure including real-time chat, secure document sharing, and a Slack-style collaboration workspace for lawyer teams.
- Integrated Stripe-based escrow payment flow for client-attorney transactions with admin oversight dashboard, reducing payment disputes and improving trust for platform users.
- Built lawyer profile system with KYC verification, performance analytics, and searchable service listings, accelerating lawyer onboarding by standardizing the submission pipeline.

Turfind — CTO & Backend Engineer · Full-time · Remote · Abuja, Nigeria

February 2023 – December 2025

- Architected and deployed a secure end-to-end real estate escrow payment system processing multi-million naira property transactions with full audit logging and dispute management.
- Built a dynamic marketplace with 3D virtual tour integration, enabling remote property discovery and cutting the need for in-person site visits for early-stage buyers.

TECHNICAL SKILLS

Languages: JavaScript, TypeScript, Golang, Python

Backend Frameworks: Node.js, NestJS, Express, Fastify, Gin

Mobile: React Native

Databases: MongoDB, PostgreSQL, Redis

Cloud & DevOps: AWS, GCP, Azure, Terraform, Jenkins, CI/CD, Docker, Bash

Practices: REST API Design, System Design, Microservices, Agile/Scrum, TDD, SDLC

PROJECTS

Dishpatch | Nodejs, MongoDB, Redis, CI/CD

- Built a multi-sided food delivery API covering menu browsing, order customization, delivery tracking, route optimization, and multi-restaurant management dashboards for operators and support teams.

How-Much | Nodejs, MongoDB, CI/CD, Openai

- Developed an AI-powered pricing engine using OpenAI to generate personalized developer rate proposals based on profile, market data, and project scope, with multi-currency support for global clients.
